| 300-499 rolls (3000-4990 sq. ft.) | 8.99 roll |

SOD Information

Each Piece = 10 sq. ft. (2' X 5') Each Pallet = 50 Pieces Each Pallet = 500 sq.ft.
600 sq. ft. pallets available if needed

There are different blends available, depending on the customer's needs. We typically supply the 90/10 Sod Blend. If a customer would like to have a specific blend outside of this the minimum order is 1000 sq. ft. and would need to be requested. See the last page for sod blends and varieties.

We guarantee that our sod is in a healthy growing condition at the time of pickup or delivery. Sod is perishable and must be installed the same day it is delivered or picked up. After installation, sod must be watered immediately and thereafter at regular intervals as required. Claims, to be considered, must be made within 24 hours of pickup or delivery.

To ensure availability of SOD it is recommended that you pre-order 24-48 in advance. All sod orders must be prepaid. The site must be well prepared prior to shipment.

A Pallet Deposit of \$21.50 per pallet is applied to every order. When a pallet is returned in good condition, \$21.50 will be credited. Pallet deposit credit is available only if the pallet was purchased through Weston Nurseries.

Tall Turf Type Fescue Mix is available for an additional charge, please ask for details.

SOD Tips

Preparing the Soil

1. Rototill or spade the soil to a depth of 4".
2. Remove sticks, stones, roots and other debris.
3. Take soil test samples done for pH and nutrient levels.
4. In accordance with soil test, mix lime and complete fertilizer into the soil.
5. Smooth the soil by raking.
6. Firm the soil by lightly rolling. Fill in any low spots.

Measuring and Ordering Sod

1. Multiply the length times the width. This gives you your total square footage to order. Suggestion: Add 5% to the total for irregular shapes.
2. Take delivery on the day you plan to start laying your sod. Install day of delivery.

Laying Your Quality Sod

1. Start at a straight line such as a driveway or walk.
2. Lay out the sod as you would a rug or tiles.
3. Make sure all joints are butted tightly together - without overlapping or spaces between strips of sod.
4. Stagger the joints in each row like rows of bricks.
5. Use a large sharp knife for shaping sod around trees, at flower beds or along borders.
6. Completely soak the sod with at least 1" of water. Start watering 20 minutes after the first strip is laid.
7. Roll the sod to smooth out small bumps and air pockets. This will assure good contact with the soil.

Watering Schedule

1. To gauge watering, simply place an empty can about 6" away from sprinkler.
2. When there is an inch of water in the can, it is time to move the sprinkler to the next area.
3. Reflected heat along buildings dries sod quickly; be sure to water such areas more often.

| | | | | | | | |
|-------------|-------|-------|-------|--|-------|--|---------|
| 1st Week | WATER | WATER | WATER | | WATER | | MO W |
| 2nd Week | WATER | | WATER | | WATER | | MO W |
| 3rd Week | | WATER | | | WATER | | MO W |

Please note to take into consideration current weather conditions when watering newly installed sod. Too much, as well as too little water, can prevent the sod from developing new roots. This chart is only a guide.

Basic Watering/Mowing Calendar

When to Mow

1. Your new living lawn may need to be mowed as soon as 1 week after installation or as the roots begin to establish.
2. Your basic mowing rule is never to remove more than 1/3 of the leaf blade during a single mowing.
3. Mow when grass height reaches 2 1/3"-3" and maintain at that height.
5. For best appearance, be sure to keep your mower blades sharp.

Traffic Caution

1. Use your new sodded lawn sparingly until good root establishment has taken place - 2-3 weeks.
2. Avoid concentrated play activities, dog traffic or similar rough usage until four weeks have passed.
3. There are no restrictions on visually enjoying your lawn.

Seed Blends and Varieties

4 way 100% Bluegrass Blend

25% Shamrock Kentucky Bluegrass
25% Gladstone Kentucky Bluegrass
